BRIGHTER
TOMORROW

A Trusted Partner in Global Healthcare Projects

In 2007, Aysmed Limited Company marked a major milestone in the Group's international growth by undertaking 12 turnkey hospital projects for SOCAR in Azerbaijan. The scope included the complete medical equipment requirements of all 12 hospitals, establishing a significant reference for Aysmed in the execution of large-scale international healthcare projects.

Building on this experience, Aysmed has expanded its capabilities across the entire lifecycle of healthcare investments. Today, the company provides integrated solutions covering medical planning and consultancy, engineering, medical equipment planning and procurement, international sourcing, logistics, installation, commissioning, user training, project management, and after-sales technical support.

With an extensive international supplier and business partner network, Aysmed works with healthcare institutions, investors, contractors, and public and private organizations to deliver solutions tailored to the clinical, technical, and operational requirements of each project.

From individual medical equipment requirements to complete hospital solutions, Aysmed combines decades of healthcare experience, technical expertise, international trade capabilities, and project management know-how under a single structure — supporting its partners from the initial concept to the successful implementation and operation of their healthcare investments.
